Press Release

Perdac Announces the next Course on Spray and Aerosol Technology following the Success of the New Course held in June 2010

Perdac Ltd Director Andrew Yule has announced the dates for the next presentation of the unique intensive course on the science and technology of producing and using liquid sprays and aerosols: 4th and 5th May 2011. The 2-day course will be held in Central Manchester.

Professor Yule stated that the first presentation of this course, on the Campus of Salford University in June 2010, was very well received by attendees who particularly appreciated the practical laboratory session on the second morning;

“The course lecturers and I have built upon what we learned from presenting many earlier spray courses and have focused the new course on the presentation of key practical information for the designers and users of spray systems. We expect that, as for the 2010 course, around 2/3rd of the attendees will be from industry, including UK, European and US branches of major multinational companies, and these industries can range from consumer products to combustion and defence”.

Once again valued contributions to the course in the field of state-of-the art spray and aerosol instrumentation will be made by Dr Martin Hyde and TSI Ltd.

The course flyer and full information can be obtained at www.perdac.com where registration on the course is also possible

Dateline: Manchester 6th November 2010
